

**CLAIMS**

What is claimed is:

1. A method for processing a payment and a disbursement at an accumulator over a network, comprising:

receiving employee information corresponding to an employee from an employer via the network, wherein the employee information comprises payment information and disbursement information; processing a payment based on the payment information via the network; and processing a disbursement based on the disbursement information via the network.

2. The method of claim 1, further including:

verifying the employee information using verification information received from an intermediary.

3. The method of claim 2, further including:

processing the payment based on the payment information, when the employee information is verified.

4. The method of claim 2, further including:

processing the disbursement based on the disbursement information, when the employee information is verified.

Fax 202.408.4400  
www.finnegan.com

5. The method of claim 3, wherein the payment is processed using debit-based electronic funds transfer.
6. The method of claim 4, wherein the disbursement is processed using addendum-based electronic data interchange.
7. The method of claim 1, wherein the employee information relates to a child support payment.
8. The method of claim 1, wherein the network is the Internet.
9. The method of claim 1, wherein the network is an intranet.
10. The method of claim 1, wherein the network is a wireless network.
11. The method of claim 1, wherein the network is a wired network.
12. The method of claim 1, wherein the network is a virtual private network.
13. The method of claim 1, further including:  
sending the employee information from the employer to the  
accumulator via the network.

19. The method of claim 17, further including:  
notifying the intermediary when the credit is applied to the account of  
the intermediary.
20. The method of claim 1, further including:  
generating a report at the accumulator based on the employee  
information.
21. A system for processing a payment and a disbursement at an accumulator  
over a network, comprising:  
a first receiving component configured to receive employee information  
corresponding to an employee from an employer via the  
network, wherein the employee information comprises payment  
information and disbursement information;  
a first processing component configured to process a payment based  
on the payment information via the network; and  
a second processing component configured to process a disbursement  
based on the disbursement information via the network.
22. The system of claim 21, further including:  
a verifying component configured to verify the employee information  
using verification information received from an intermediary.

23. The system of claim 22, further including:  
a third processing component configured to process the payment  
based on the payment information, when the employee  
information is verified.
24. The system of claim 22, further including:  
a fourth processing component configured to process the  
disbursement based on the disbursement information, when the  
employee information is verified.
25. The system of claim 23, wherein the payment is processed using debit-based  
electronic funds transfer.
26. The system of claim 24, wherein the disbursement is processed using  
addendum-based electronic data interchange.
27. The system of claim 21, wherein the employee information relates to a child  
support payment.
28. The system of claim 21, wherein the network is the Internet.
29. The system of claim 21, wherein the network is an intranet.

30. The system of claim 21, wherein the network is a wireless network.
31. The system of claim 21, wherein the network is a wired network.
32. The system of claim 21, wherein the network is a virtual private network.
33. The system of claim 21, further including:  
a first sending component configured to send the employer information  
from the employer to the accumulator via the network.
34. The system of claim 21, wherein the first processing component further  
includes:  
a generating component configured to generate a debit based on the  
employee information; and  
a second sending component configured to send the debit to a  
financial clearinghouse via the network.
35. The system of claim 34, wherein the first processing component further  
includes:  
a third sending component configured to send the debit from the  
financial clearinghouse to a financial institution associated with  
the employer via the network; and

a first applying component configured to apply the debit to an account  
of the employer at the financial institution.

36. The system of claim 35, wherein the debit is applied to the account of the employer using electronic funds transfer.

37. The system of claim 34, wherein the second processing component further includes:

a fourth sending component configured to send a credit from the  
financial clearinghouse to a financial institution associated with  
an intermediary; and

a second applying component configured to apply the credit to an  
account of the intermediary at the financial institution.

38. The system of claim 37, wherein the credit is applied to the account of the intermediary using addendum-based electronic data interchange.

39. The system of claim 37, further including:

a notifying component configured to notify the intermediary when the  
credit is applied to the account of the intermediary.

40. The system of claim 21, further including:

FINNEGAN

a generating component configured to generate a report at the  
accumulator based on the employee information.

41. A computer readable medium having computer readable code embodied therein for processing a payment and a disbursement at an accumulator over a network, the computer readable code comprising:

a receiving module configured to receive employee information  
corresponding to an employee from an employer via the  
network, wherein the employee information comprises payment  
information and disbursement information;  
a first processing module configured to process a payment based on  
the payment information via the network; and  
a second processing module configured to process a disbursement  
based on the disbursement information via the network.

42. A system for processing a payment and a disbursement at an accumulator over a network, comprising:

means for receiving employee information corresponding to an  
employee from an employer via the network, wherein the  
employee information comprises payment information and  
disbursement information;  
means for processing a payment based on the payment information via  
the network; and

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

means for processing a disbursement based on the disbursement  
information via the network.

43. A method for processing a payment at an accumulator over a network,  
comprising:

receiving employer information from an employer via the network;  
storing the employer information;  
receiving employee information corresponding to an employee from  
the employer via the network;  
storing the employee information;  
verifying the employee information using verification information  
received from an intermediary; and  
when the employee information is verified,  
creating a payment corresponding to the employee  
information,  
submitting the payment to a financial clearinghouse via  
the network, and  
storing data related to the payment.

44. The method of claim 43, wherein the employer information includes at least  
one of user information and employer account information.

45. The method of claim 43, wherein the submitting further includes:

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW  
Washington, DC 20005

Fax 202.408.4400  
www.finnegan.com

processing a debit to the financial clearinghouse, the debit to be  
applied against an account of the employer.

46. The method of claim 45, wherein the submitting further includes:  
receiving a credit from the financial clearinghouse, the credit to be  
applied to an account of the intermediary.
47. The method of claim 45, wherein the debit is processed using debit-based  
electronic funds transfer.
48. The method of claim 46, wherein the credit is processed using addendum-  
based electronic data interchange.
49. The method of claim 43, wherein the employee information relates to a child  
support payment.
50. The method of claim 43, further including:  
generating a report based on the employee information.
51. The method of claim 50, further including:  
sending the report based on the employee information to the employer.
52. The method of claim 43, further including:

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW  
Washington, DC 20005  
202.408.4000

www.finnegan.com

generating a report based on the employer information.

53. The method of claim 52, further including:  
sending the report based on the employer information to the employer.
54. The method of claim 43, wherein the network is the Internet.
55. The method of claim 43, wherein the network is an intranet.
56. The method of claim 43, wherein the network is a wireless network.
57. The method of claim 43, wherein the network is a wired network.
58. The method of claim 43, wherein the network is a virtual private network.
59. A system for processing a payment at an accumulator over a network,  
comprising:  
a first receiving component configured to receive employer information  
from an employer via the network;  
a first storing component configured to store the employer information;  
a second receiving component configured to receive employee  
information corresponding to an employee from the employer  
via the network;

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

a second storing component configured to store the employee  
information;  
a verifying component configured to verify the employee information  
using verification information received from an intermediary; and  
when the employee information is verified,  
a creating component configured to create a payment  
corresponding to the employee information,  
a submitting component configured to the payment to a  
financial clearinghouse via the network, and  
a third storing component configured to store data related  
to the payment.

60. The system of claim 59, wherein the employer information includes at least one of user information and employer account information.

61. The system of claim 59, wherein the submitting component further includes:  
a processing component configured to process a debit to the financial  
clearinghouse, the debit to be applied against an account of the  
employer.

62. The system of claim 61, wherein the submitting component further includes:

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

Washington, DC 20005  
202.408.4000  
Fax 202.408.4400  
www.finnegan.com

a third receiving component configured to receive a credit from the  
financial clearinghouse, the credit to be applied to an account of  
the intermediary.

63. The system of claim 61, wherein the debit is processed using debit-based  
electronic funds transfer.

64. The system of claim 62, wherein the credit is processed using addendum-  
based electronic data interchange.

65. The system of claim 59, wherein the employee information relates to a child  
support payment.

66. The system of claim 59, further including:  
a first generating component configured to generate a report based on  
the employee information.

67. The system of claim 66, further including:  
a first sending component configured to send the report based on the  
employee information to the employer.

68. The system of claim 59, further including:

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW  
Washington, DC 20005

a second generating component configured to generate a report based  
on the employer information.

69. The system of claim 68, further including:

a second sending component configured to send the report based on  
the employer information to the employer.

70. The system of claim 59, wherein the network is the Internet.

71. The system of claim 59, wherein the network is an intranet.

72. The system of claim 59, wherein the network is a wireless network.

73. The system of claim 59, wherein the network is a wired network.

74. The system of claim 59, wherein the network is a virtual private network.

75. A computer readable medium having computer readable code embodied  
therein for processing a payment at an accumulator over a network, the computer  
readable code comprising:

a first receiving module configured to receive employer information  
from an employer via the network;

a first storing module configured to store the employer information;

a second receiving module configured to receive employee information  
corresponding to an employee from the employer via the  
network;

a second storing module configured to store the employee information;

a verifying module configured to verify the employee information using  
verification information received from an intermediary; and

when the employee information is verified,

a creating module configured to create a payment  
corresponding to the employee information,

a submitting module configured to submit the payment to  
a financial clearinghouse via the network, and

a third storing module configured to store data related to  
the payment.

76. A system for processing a payment at an accumulator over a network,  
comprising:

means for receiving employer information from an employer via the  
network;

means for storing the employer information;

means for receiving employee information corresponding to an  
employee from the employer via the network;

means for storing the employee information;

means for verifying the employee information using verification  
information received from an intermediary; and  
when the employee information is verified,  
means for creating a payment corresponding to the  
employee information,  
means for submitting the payment to a financial  
clearinghouse via the network, and  
means for storing data related to the payment.

77. A method for processing a payment at an accumulator over a network,  
comprising:

receiving employer information from an employer via the network;  
storing the employer information in an accumulator database;  
receiving an employee payment profile corresponding to an employee  
from the employer via the network;  
storing the employee payment profile in the accumulator database;  
verifying the employee payment profile using verification information  
received from an intermediary; and  
when the employee payment profile is verified,  
creating a payment corresponding to the employee  
payment profile,

processing a debit to a financial clearinghouse via the  
network, the debit to be applied against an  
account of the employer,  
receiving a credit from the financial clearinghouse via the  
network, the credit to be applied to an account of  
the intermediary, and  
storing data related to the payment in a payment  
database.

78. The method of claim 77, further including:  
managing communication with the employer via the network.
79. The method of claim 77, further including:  
managing communication with the intermediary via the network.
80. The method of claim 77, further including:  
administering the accumulator.
81. The method of claim 77, wherein the debit is processed using debit-based  
electronic funds transfer.
82. The method of claim 77, wherein the credit is processed using addendum-  
based electronic data interchange.

83. The method of claim 77, wherein the employee information relates to a child support payment.

84. The method of claim 77, wherein the network is the Internet.

85. The method of claim 77, wherein the network is an intranet.

86. The method of claim 77, wherein the network is a wireless network.

87. The method of claim 77, wherein the network is a wired network.

88. The method of claim 77, wherein the network is a virtual private network.

89. A system for processing a payment at an accumulator over a network, comprising:

a first receiving component configured to receive employer information

from an employer via the network;

a first storing component configured to store the employer information

in an accumulator database;

a second receiving component configured to receive an employee

payment profile corresponding to an employee from the

employer via the network;

means for creating a payment corresponding to the employee payment profile, when the employee payment profile is verified;

means for processing a debit to a financial clearinghouse via the network, the debit to be applied against an account of the employer, when the employee payment profile is verified;

means for receiving a credit from the financial clearinghouse via the network, the credit to be applied to an account of the intermediary, when the employee payment profile is verified;

and

means for storing data related to the payment in a payment database, when the employee payment profile is verified.

103. A method for processing a payment at an accumulator over a network, comprising:

receiving employer information to register an employer for submitting at least one payment over the network;

storing the employer information in a database;

receiving data about a bank account of the employer via the network;

storing the data about the bank account of the employer in the database;

receiving data about a user representing the employer via the network;

storing the data about the user representing the employer in the database;

FINNEGAN  
HENDERSON  
FARABOW

receiving payment profile information relating to at least one employee  
of the employer via the network;  
storing the payment profile information in the database; and  
receiving payment information relating to an employee from the  
employer via the network, the payment information specifying a  
date for processing a payment based on the payment  
information

104. The method of claim 103, further including:

generating a password for the registered employer to enable the  
employer to submit at least one payment over the network.

105. The method of claim 104, further including:

receiving a request for a new password from the employer via the  
network; and  
updating the password for the employer.

106. The method of claim 103, further including:

receiving log in information from the employer via the network; and  
enabling the employer to submit at least one payment over the  
network, in response to the log in information.

107. The method of claim 103, further including:

receiving employee detail information from the employer via the  
network; and  
storing the employee detail information in the database.

108. The method of claim 103, further including:

receiving a county code query from the employer via the network;  
retrieving a county name corresponding to the county code from a  
stored county code table; and  
providing the county name to the employer.

109. The method of claim 103, further including:

receiving log-out information from the employer via the network; and  
disabling the employer from submitting payments over the network in  
response to the log-out information.

110. The method of claim 103, wherein the employer information includes at least one of: federal employee identification number, employer name, employer address, primary user name, primary user phone number, primary user ID, and primary user e-mail address.

111. The method of claim 103, wherein the data about the bank account of the employer includes at least one of: routing number, bank name, account number, account type, maximum daily withdrawal, and default bank indicator.

112. The method of claim 103, wherein the data about the user representing the employer includes at least one of: user ID, user name, user status, user password, user e-mail address, and user permission.

113. The method of claim 112, wherein the user permission includes at least one of: withholding payment permission, withholding profile permission, payment submission permission, transaction history report permission, withholding profile report permission, and payment history report permission.

114. The method of claim 103, wherein the payment profile information includes at least one of: payment profile name, employer bank account, number of employees, total payment amount, effective date, and withholding date.

115. The method of claim 103, wherein the payment information includes at least one of: employee identification number, employee case number, employee name, employee payment amount, employee withholding date, and medical insurance indicator.

116. The method of claim 103, further including:  
generating a report based on payments submitted by the employer.

117. The method of claim 103, further including:

112. The method of claim 103, wherein the data about the user representing the employer includes at least one of: user ID, user name, user status, user password, user e-mail address, and user permission.

generating a report based on the payment profile information.

118. The method of claim 103, further including:

generating a report based on payments collected from an employee.

119. The method of claim 103, wherein the network is the Internet.

120. The method of claim 103, wherein the network is an intranet.

121. The method of claim 103, wherein the network is a wireless network.

122. The method of claim 103, wherein the network is a wired network.

123. The method of claim 103, wherein the network is a virtual private network.

124. The method of claim 103, wherein the payment information relates to a child support payment.

125. A system for processing a payment at an accumulator over a network,  
comprising:

a first receiving component configured to receive employer information  
to register an employer for submitting at least one payment over  
the network;

U.S. PATENT & TRADEMARK OFFICE

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW

a first storing component configured to store the employer information  
in a database;  
a second receiving component configured to receive data about a bank  
account of the employer via the network;  
a second storing component configured to store the data about the  
bank account of the employer in the database;  
a third receiving component configured to receive data about a user  
representing the employer via the network;  
a third storing component configured to store the data about the user  
representing the employer in the database;  
a fourth receiving component configured to receive payment profile  
information relating to at least one employee of the employer via  
the network;  
a fourth storing component configured to store the payment profile  
information in the database; and  
a fifth receiving component configured to receive payment information  
relating to an employee from the employer via the network, the  
payment information specifying a date for processing a payment  
based on the payment information.

126. The system of claim 125, further including:

FINNEGAN

a first generating component configured to generate a password for the registered employer to enable the employer to submit at least one payment over the network.

127. The system of claim 126, further including:

a sixth receiving component configured to receive a request for a new password from the employer via the network; and  
an updating component configured to update the password for the employer.

128. The system of claim 125, further including:

a seventh receiving component configured to receive log in information from the employer via the network; and  
an enabling component configured to enable the employer to submit at least one payment over the network, in response to the log in information.

129. The system of claim 125, further including:

an eighth receiving component configured to receive employee detail information from the employer via the network; and  
a fifth storing component configured to store the employee detail information in the database.

130. The system of claim 125, further including:

a ninth receiving component configured to receive a county code query  
from the employer via the network;

a retrieving component configured to retrieve a county name  
corresponding to the county code from a stored county code  
table; and

a providing component configured to provide the county name to the  
employer.

131. The system of claim 125, further including:

a tenth receiving component configured to receive log-out information  
from the employer via the network; and

a disabling component configured to disable the employer from  
submitting payments over the network in response to the log-out  
information.

132. The system of claim 125, wherein the employer information includes at least  
one of: federal employee identification number, employer name, employer address,  
primary user name, primary user phone number, primary user ID, and primary user  
e-mail address.

specifying a date for processing a payment based on the  
payment information

149. A method for processing a payment at an accumulator that receives employer information and data about a bank account of the employer via a network, comprising:

storing the employer information in a database;

storing the data about the bank account of the employer in the  
database;

submitting a debit against the bank account of the employer via a  
financial clearinghouse based on instructions received from the  
employer;

if the debit is not applied successfully against the bank account of the  
employer at an employer's bank by the financial clearinghouse,  
handling a return received from the financial  
clearinghouse, the return indicating that the debit  
was not successful; and

if the debit is applied successfully against the bank account of the  
employer at the employer's bank,  
receiving a credit corresponding to the debit from the  
financial clearinghouse.

150. The method of claim 149, further including:

FINNEGAN

receiving a user permission related to the employer information via the  
network; and  
storing the user permission with the employer information in the  
database.

151. The method of claim 149, further including:

receiving an update to the employer information via the network; and  
storing the update with the employer information in the database.

152. The method of claim 149, further including:

receiving an update to the data about the bank account of the  
employer via the network; and  
storing the update with the data about the bank account of the  
employer in the database.

153. The method of claim 149, wherein the handling step further includes:

receiving a query from a user at the accumulator, the query containing  
data about the return;  
retrieving the data about the bank account of the employer  
corresponding to the query from the database;  
receiving a reason for the return from the user at the accumulator;  
storing the reason for the return with the data about the bank account  
of the employer in the database; and

canceling a payment associated with the bank account.

154. The method of claim 153, wherein the handling step further includes:

disabling at least one bank account for any other employers linked to  
the bank account of the employer.

155. The method of claim 149, wherein the employer information includes at least one of: employer account number, federal employee identification number, employer name, employer address, primary user name, primary user phone number, primary user ID, and primary user e-mail address.

156. The method of claim 149, wherein the data about the bank account of the employer includes at least one of: routing number, bank name, account number, account type, maximum daily withdrawal, and default bank indicator.

157. The method of claim 149, wherein the receiving step further includes:

collecting credits corresponding to a plurality of employers into a credit  
batch;  
generating credit batch data; and  
sending the credit batch to the intermediary.

158. The method of claim 157, wherein the credit batch data includes at least one of: batch number, effective date, creation date, batch status, bank account type, credit bank information, number of employers, number of payments, file creation date, file send date, and total credit amount.

159. The method of claim 157, further including:

generating a summary report of the credits in the credit batch.

160. The method of claim 149, wherein the submitting further includes:

collecting debits corresponding to a plurality of employers into a debit batch;

generating debit batch data; and

sending the debit batch to the bank account of the employer at the employer's bank via the financial clearinghouse.

161. The method of claim 160, wherein the debit batch data includes at least one of: batch number, effective date, creation date, batch status, batch stage, bank account type, bank information, number of employers, number of payments, file creation date, file send date, and total debit amount.

162. The method of claim 160, further including:

generating a summary report of the debits in the debit batch.

204. The method of claim 202, further including:
- receiving a credit corresponding to the employee debits, when the  
employee information is verified.
205. The method of claim 201, wherein the sending further includes:
- delivering each batch file to each intermediary using a communication  
method matching the intermediary identifier.
206. The method of claim 205, wherein the communication method is electronic  
funds transfer.
207. The method of claim 205, wherein the communication method is electronic  
data interchange.
208. The method of claim 205, wherein the communication method is paper.
209. The method of claim 201, wherein the network is the Internet.
210. The method of claim 201, wherein the network is an intranet.
211. The method of claim 201, wherein the network is a wireless network.

204. The method of claim 202, further including:

receiving a credit corresponding to the employee debits, when the  
employee information is verified.

FINNEGAN

212. The method of claim 201, wherein the network is a wired network.
213. The method of claim 201, wherein the network is a virtual private network.
214. The method of claim 201, wherein the employee information relates to a child support payment.
215. The method of claim 201, wherein the debits are processed using debit-based electronic funds transfer.
216. The method of claim 201, wherein the credits are processed using addendum-based electronic data interchange.
217. A system for processing payments over a network for a plurality of intermediaries, comprising:
- a first receiving component configured to receive employee information from a plurality of employers via the network, the employee information corresponding to at least one employee of each employer and including an intermediary identifier;
  - a first processing component configured to process at least one employee debit corresponding to the employee information for each employee;

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW  
Washington, DC 20005

a second processing component configured to process a credit  
corresponding to each employee debit;  
a batching component configured to batch the credits into a plurality of  
batch files based upon the intermediary identifier; and  
a sending component configured to send each batch file to an  
intermediary based on the intermediary identifier.

218. The system of claim 217, further including:

a verifying component configured to verify the employee information  
using verification information received from an intermediary.

219. The system of claim 218, further including:

a third processing component configured to process the employee  
debit corresponding to the employee information for each  
employee, when the employee information is verified.

220. The system of claim 218, further including:

a second receiving component configured to receive a credit  
corresponding to the employee debits, when the employee  
information is verified.

221. The system of claim 217, wherein the sending further includes:

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

FINNEGAN

a delivering component configured to deliver each batch file to each  
intermediary using a communication method matching the  
intermediary identifier.

222. The system of claim 221, wherein the communication method is electronic funds transfer.

223. The system of claim 221, wherein the communication method is electronic data interchange.

224. The system of claim 221, wherein the communication method is paper.

225. The system of claim 217, wherein the network is the Internet.

226. The system of claim 217, wherein the network is an intranet.

227. The system of claim 217, wherein the network is a wireless network.

228. The system of claim 217, wherein the network is a wired network.

229. The system of claim 217, wherein the network is a virtual private network.

OFFICE OF THE  
COMPTROLLER OF THE  
CURRENCY  
WASHINGTON, DC 20005

230. The system of claim 217, wherein the employee information relates to a child support payment.

231. The system of claim 217, wherein the debits are processed using debit-based electronic funds transfer.

232. The system of claim 217, wherein the credits are processed using addendum-based electronic data interchange.

233. A computer readable medium having computer readable code embodied therein for processing payments over a network for a plurality of intermediaries, the computer readable code comprising:

a receiving module configure to receive employee information from a plurality of employers via the network, the employee information corresponding to at least one employee of each employer and including an intermediary identifier;

a first processing module configure to process at least one employee debit corresponding to the employee information for each employee;

a second processing module configure to process a credit corresponding to each employee debit;

a batching module configure to batch the credits into a plurality of batch files based upon the intermediary identifier; and

2025 RELEASE UNDER E.O. 14176

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

1300 I Street, NW  
Washington, DC 20005

a sending module configure to send each batch file to an intermediary  
based on the intermediary identifier.

234. A system for processing payments over a network for a plurality of  
intermediaries, comprising:

means for receiving employee information from a plurality of employers  
via the network, the employee information corresponding to at  
least one employee of each employer and including an  
intermediary identifier;

means for processing at least one employee debit corresponding to the  
employee information for each employee;

means for processing a credit corresponding to each employee debit;

means for batching the credits into a plurality of batch files based upon  
the intermediary identifier; and

means for sending each batch file to an intermediary based on the  
intermediary identifier.

235. A method for processing a payment over a network at an accumulator storing  
a plurality of templates for a plurality of intermediaries, comprising:

receiving employee information from a plurality of employers via the  
network, the employee information corresponding to at least one  
employee of each employer and including an intermediary  
identifier;

FINNEGAN

filtering the employee information using a template based on one  
intermediary corresponding to the intermediary identifier; and  
processing at least one employee debit corresponding to the filtered  
employee information.

236. The method of claim 235, further including:

processing a credit corresponding to the employee debit; and  
sending the credit to an intermediary represented by the intermediary  
identifier.

237. The method of claim 235, further including:

presenting the template matching the intermediary identifier to the  
employer to direct the contents of the employee information.

238. The method of claim 235, further including:

verifying the employee information using verification information  
received from the intermediary associated with the intermediary  
identifier in the employee information.

239. The method of claim 235, further including:

presenting a single template to the employer, from which the template  
matching the intermediary identifier is determined.

240. The method of claim 238, further including:

processing the employee debit from the employer based on the filtered  
employee information, when the employee information is  
verified.

241. The method of claim 238, further including:

receiving the credit corresponding to the debit, when the employee  
information is verified.

242. The method of claim 235, wherein the network is the Internet.

243. The method of claim 235, wherein the network is an intranet.

244. The method of claim 235, wherein the network is a wireless network.

245. The method of claim 235, wherein the network is a wired network.

246. The method of claim 235, wherein the network is a virtual private network.

247. The method of claim 235, wherein the employee information relates to a child  
support payment.

248. The method of claim 235, wherein the debit is processed using debit-based electronic funds transfer.

249. The method of claim 235, wherein the credit is processed using addendum-based electronic data interchange.

250. A system for processing a payment over a network at an accumulator storing a plurality of templates for a plurality of intermediaries, comprising:

- a first receiving component configured to receive employee information from a plurality of employers via the network, the employee information corresponding to at least one employee of each employer and including an intermediary identifier;
- a filtering component configured to filter the employee information using a template based on one intermediary corresponding to the intermediary identifier; and
- a first processing component configured to process at least one employee debit corresponding to the filtered employee information.

251. The system of claim 250, further including:

- a second processing component configured to process a credit corresponding to the employee debit; and

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

a sending component configured to send the credit to an intermediary  
represented by the intermediary identifier.

252. The system of claim 250, further including:

a first presenting component configured to present the template  
matching the intermediary identifier to the employer to direct the  
contents of the employee information.

253. The system of claim 250, further including:

a verifying component configured to verify the employee information  
using verification information received from the intermediary  
associated with the intermediary identifier in the employee  
information.

254. The system of claim 250, further including:

a second presenting component configured to present a single  
template to the employer, from which the template matching the  
intermediary identifier is determined.

255. The system of claim 253, further including:

a second processing component configured to process the employee  
debit from the employer based on the filtered employee  
information, when the employee information is verified.

FINNEGAN  
HENDERSON  
FARABOW  
GARRETT &  
DUNNER LLP

256. The system of claim 253, further including:  
a second receiving component configured to receive the credit  
corresponding to the debit, when the employee information is  
verified.
257. The system of claim 250, wherein the network is the Internet.
258. The system of claim 250, wherein the network is an intranet.
259. The system of claim 250, wherein the network is a wireless network.
260. The system of claim 250, wherein the network is a wired network.
261. The system of claim 250, wherein the network is a virtual private network.
262. The system of claim 250, wherein the employee information relates to a child  
support payment.
263. The system of claim 250, wherein the debit is processed using debit-based  
electronic funds transfer.
